<u></u>	SECRET CONFIDENTIAL UNCLAS
	Approved For Release 2005/05/20: CIA-RDP78B04770A001600010082-5 NARRATIVE REPORT
1.	The following monthly reports have been received: a. No. 11, for the period 1 May to 1 June 1965 b. No. 12, for the period 1 June to 1 July 1965
2.	c. No 13, for the period 1 July to 1 September 1965 On 2 September 1965, gave the Technical Representative informal copies of their letter of 31 August 1965, information us of an expected increase in cost due to a change in scope. The magnitude of the cost increase is for Printer No. 1 and for Printer No. 2, a total of including an increase in fee. This letter is being evaluated by the Development Branch, PADS/NPIC. A decision will not be made until we have also evaluated the audit being made on this
3.	contract.
	Printer No. 1 (87% of time used) Printer No. 2 (65% of time used) Total
	that the contractor was not reporting commitments and therefore was not providing sufficient information to properly report the percentage of fun expended or its relationship to the percent of work completed.
4.	and the second s
4.	Tully satisfied with the Test Plan which wrote for this printer They feel that it still lacks sufficient detail, but rather than delate the project, will accept it. They intend to be quite strict when the evaluate the performance of the printer during the acceptance tests. b. Delivery of this printer will be delayed because of, among other thin problems encountered in sensing frame edges on positive film. It appears that sensing the program as they should have been.
4.	Tully satisfied with the Test Plan which wrote for this printer They feel that it still lacks sufficient detail, but rather than delet the project, will accept it. They intend to be quite strict when the evaluate the performance of the printer during the acceptance tests. b. Delivery of this printer will be delayed because of, among other thin problems encountered in sensing frame edges on positive film. It
	GIMRADA, and fully satisfied with the fest Plan which wrote for this printer They feel that it still lacks sufficient detail, but rather than dela the project, will accept it. They intend to be quite strict when the evaluate the performance of the printer during the acceptance tests. b. Delivery of this printer will be delayed because of, among other thin problems encountered in sensing frame edges on positive film. It appears that was not sufficiently aware of the magnitude of thi problem as early in the program as they should have been. c. With the exception of the above, work on this printer appears to be progressing satisfactorily. Printer No. 2: a. Two kinds of "banding" or unevenness of exposure of the raw stock, he been encountered. One type was due to dark streaks in the fluorescen tube which provides the illumination for exposing the raw stock. Thi has been eliminated by the use of fixed magnets, whose field affect t ionized gas in the desired manner. The other type of "banding" was d
	GINRADA, and perparams, are not fully satisfied with the Test Plan which wrote for this printer They feel that it still lacks sufficient detail, but rather than delate the project, will accept it. They intend to be quite strict when the evaluate the performance of the printer during the acceptance tests. b. Delivery of this printer will be delayed because of, among other thin problems encountered in sensing frame edges on positive film. It appears that was not sufficiently aware of the magnitude of this problem as early in the program as they should have been. c. With the exception of the above, work on this printer appears to be progressing satisfactorily. Printer No. 2: a. Two kinds of "banding" or unevenness of exposure of the raw stock, he been encountered. One type was due to dark streaks in the fluorescentube which provides the illumination for exposing the raw stock. This has been eliminated by the use of fixed magnets, whose field affect to ionized gas in the desired manner. The other type of "banding" was do to variations in the velocity of the exposure lamp transport. b. expects to use DC motors as their speed can be held to within a of the desired speec. Use of DC motors will also permit as much as a local range in the velocity of the transport, which in turn will permit
	Tully satisfied with the Test Plan which wrote for this printer They feel that it still lacks sufficient detail, but rather than dels the project, will accept it. They intend to be quite strict when the evaluate the performance of the printer during the acceptance tests. b. Delivery of this printer will be delayed because of, among other thin problems encountered in sensing frame edges on positive film. It appears that was not sufficiently aware of the magnitude of this problem as early in the program as they should have been. c. With the exception of the above, work on this printer appears to be progressing satisfactorily. Printer No. 2: a. Two kinds of "banding" or unevenness of exposure of the raw stock, he been encountered. One type was due to dark streaks in the fluorescent tube which provides the illumination for exposing the raw stock. This has been eliminated by the use of fixed magnets, whose field affect to ionized gas in the desired manner. The other type of "banding" was due to variations in the velocity of the exposure lamp transport. b. expects to use DC motors as their speed can be held to within a of the desired speec. Use of DC motors will also permit as much as a content of the desired speec.
